SUMMARY

Full stack developer with professional experience building and deploying web and mobile applications with React, Next.js, TypeScript and Java with Spring Boot. Delivered complete products —an e-commerce platform with an integrated payment gateway, mobile management applications and service platforms for public-sector organizations— covering user interfaces, REST APIs, databases and production deployment.

EXPERIENCE

Frontend Web & Mobile Developer

Nov. 2025 – Present

IUVADE S.R.L.

Peru

- Built **Aiddix**, an online store with a headless architecture in Next.js on top of WooCommerce, implementing a BFF layer with route handlers that keeps credentials and session out of the browser.
- Integrated card payments and the **3D Secure** authentication flow, running the transaction server-side and recalculating prices and shipping costs so the final amount never depends on data sent from the client.
- Deployed the store as a **Docker** image published to a private registry and running on a VPS behind an HTTPS reverse proxy.
- Took ownership of **SIGGE**, a React Native mobile application, and developed its sales module: barcode scanning, customer lookup by national ID, receipt and invoice issuing, and printing on thermal printers.
- Developed modules of a public-sector **virtual office** platform —document intake, electronic mailbox and case file lookup— with authentication, REST API consumption, internationalization and an embedded PDF viewer.
- Delivered and deployed corporate and institutional websites in React and Next.js, and maintained existing WordPress sites.

PROJECTS

Tendora | React 19, TypeScript, Spring Boot, PostgreSQL, STOMP/SockJS, Docker

tendora.luiscama.com

- Multi-role SaaS platform for restaurant operations, with role-based access control (RBAC) across five profiles and real-time synchronization between the waiter, the kitchen and the till.
- Implemented JWT authentication with refresh tokens and OAuth 2.0; the interceptor queues in-flight requests during renewal to prevent concurrent refreshes.
- Designed the real-time messaging client over STOMP/SockJS as a singleton, with per-event-type handler registration, deferred teardown between routes and reconnection on network drops.
- Built the 10-module REST API with server-side validation and a uniform error contract.

Estilo Único | Java, Spring Boot, Spring Data JPA, Thymeleaf, MySQL, Docker

estilounico.luiscama.com

- Full-stack e-commerce web application with three user profiles, each with its own panel: administration, point of sale, and a catalog with cart and checkout.
- Server-side rendering with Thymeleaf, a persistence layer on Spring Data JPA and role-based access control through interceptors.

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, Java, SQL, HTML, CSS

Frontend: React, Next.js, React Native, Expo, Tailwind CSS, TanStack Query, Zustand, React Hook Form, Zod

Backend: Spring Boot, Spring Data JPA, REST APIs, JWT, OAuth 2.0, WebSocket (STOMP)

Databases: PostgreSQL, MySQL

Infrastructure & Tools: Docker, Nginx, Linux VPS, Cloudflare, Git, GitHub

EDUCATION

CIBERTEC

2024 – 2026

Computer Science, Class of 2026

Peru

LANGUAGES

Spanish (native) · English (B2)
